

Abrasive Blasting & Coating Specialists

"We've got you covered"

Abrasive blasting & coating specialists for over 40 years

Originally formed in 1971, Rudolphs is a family owned and operated Northland business, specialising in providing abrasive blasting and application of coating systems to the New Zealand market. We are committed to being a leader for the industry in Northland and in the New Zealand market.

We are one of the larger abrasive blasting and coating companies operating in New Zealand, working primarily in marine vessel maintenance at two primary Port Whangarei sites, and structural engineering from our Ruakaka site.

Our commitment to providing exceptional quality work and outstanding customer service has been the key to our success over the last four decades, as well as being integral to our future success.

Vision

To be Northland's leading provider of abrasive blasting and coating services, competing locally, nationally and internationally.

Mission

To 'wow' our customers with excellent customer service, by delivering high quality abrasive blasting and coating services in a safe and efficient manner. Quality and safety does not cost - it pays!

Commitment

To our customers: Ensure customer satisfaction by getting it right first time, every time.

To our employees: Value our employees for their contribution to the success of the company, and provide them with professional development to ensure we are equipped to deliver an exceptional service.

To our shareholders: Operate in a manner that keeps us financially viable, and which provides a positive return on investment for shareholders.

Health & Safety

Our priority above all else is the safety and wellbeing of all those who come in contact with Rudolphs.

We are committed to staff achieving Level 3 and/or Level 4 Health and Safety Workplace and/or HSE Workplace Co-ordination National Certificates via SafeTrades Northtec.

We gained Tertiary Level Accreditation for ACC Workplace Safety Management Practices in 2009, 2012 and October 2014.

In 2012 we were especially proud to receive the ACC Workplace Safety Award at the Westpac Northland Excellence in Business awards, as well as the Golden Bay Cement Excellence in Business award for a Medium Business.

Our People

Our team of 31 is our strongest asset, and the driving force behind our business. It is through their hard work and dedication that we are able to provide our high standard of output and service.

We are absolutely committed to providing our employees with every opportunity for training and upskilling. We are always proud of their achievements, from success in Exito Blaster Coater level 2 and 3, OSH Workplace, OSH Co-ordination, and First Line Management training (all NZQA unit standards), to various other external training opportunities including Pro-Activate Fusion at Work, one on one coaching and NACE 1, 2 and 3 Coating Inspectors. We're proud to say our dedication to upskilling our employees is creating a benchmark within our industry.

Our Capabilities

Our contracts have taken us from Cape Reinga in the Far North to Bluff in the Far South.

We are approved applicators by New Zealand's leading paint suppliers, and have Approved Contractor Status with Golden Bay Cement and Whangarei District Council. Currently, and for the past 3 years, we have been the approved external coating contractor for Refining NZ.

We have served the marine industry for the past 20 years, subcontracting to the former North Port Engineering Company in Whangarei. We are currently working as a preferred service provider to Ship Repair New Zealand Ltd at the largest slipway in the North, which can accommodate vessels up to 90m in length and up to 1800 tonnes.

Our Ruakaka and Whangarei yards have fully contained blast-booth facilities with extended undercover buildings. Our Ruakaka site is on a 10 acre block which can provide extensive laydown areas.

We are also in the process of becoming Certified Installers of Engineered Composite Wraps - a method to reinstate integrity to corroded or damaged process pressurised equipment in high risk industries. We will be the first NZ based company to offer this innovative solution.

Our Services

Marine

We complete major marine projects on large local and international vessels for Ship Repair NZ and smaller marine vessels at our Port Road yard, with private yachts, launches and NZ fishing vessels under 70 tonne being hauled out via Dockland 5. From underwater hulls and topsides, to engine rooms and void spaces we cover them all.

Industrial

Our Ruakaka yard services major engineering company South Pacific Instrumentation (SPIIND), as well as local and regional businesses, and also provides an outwork facility directly for Refining NZ.

Our joint venture with Culham Engineering services a variety of large scale structural steel projects for Northland and national companies.

Commercial

Rudolphs also service the transport and construction industries with preparation and coatings, both on new builds, and maintenance to existing plant, equipment and vehicles. For customers such as Golden Bay Cement, Winstone Quarries, Refining NZ and many others, our services are critical to protect the integrity of their valuable business assets from the harsh environments in which they work.

Case Studies

McConnell Dowell

Lower Hatea Bridge Project

Being chosen as the approved contractor to provide specialised blasting, arc-spray and coating applications on site at the Lower Hatea Bridge Project for McConnell Dowell has been a challenging and rewarding project for Rudolphs.

Being able to contribute to such an iconic NZ project in our own town, over our own river is not only testament to our capacity and capability but is a testament to the very heart and soul of our commitment to Northland.

Refining NZ

Point Forward & Te Mahi Hou Projects

Rudolphi supplied kilometres of pipework that was abrasive blasted and coated in our Ruakaka yard as part of Refining NZ's two most recent significant projects.

Subcontracting to South Pacific Industrial Ltd and Culham Engineering, Rudolphi also supplied on-site crews for touch up and site work on the Point Forward project.

Sealink

Seabridge

Rudolphs subcontracting to Ship Repair NZ was involved from the very first stage of this new build project for the Sealink Ferry "Seabridge".

Commencing with preparation of black steel plate in late 2012 to completion of all coatings for the fully constructed vessel both inside and outside, the Rudolphs Team assigned to the project are proud to have been the chosen coatings applicator.

Rudolphs completed all the abrasive blasting work and applied approximately 5500L of Akzo Nobel's International Paint Coatings range of various high performance products over the 9 month painting programme.

Whangarei Engineering

Countdown Waiheke Project

“Rudolphs Ltd have had a long and successful relationship with Whangarei Engineering providing coating services in the marine and infrastructure sectors. Their reputation for consistent excellence in delivery whilst maintaining a strong focus on customer service and health and safety is well earned.”

“Their team were key contributors to the success of the recently completed Countdown Waiheke Project being delivered to our client’s expectations. We wish Rudolphs Ltd every success in their future endeavours and look forward to an ongoing mutually beneficial relationship.”

Ian T Hendrikse
Managing Director - Whangarei Engineering

Department of Conservation

Cape Brett Lighthouse

One of our more challenging projects was the Cape Brett Lighthouse. The substantial upgrade undertaken by DOC included repairing and repainting the lighthouse and the lighthouse cottage and tidying up of the general site.

Nearly 50 tonnes of material was barged and helicoptered to the lighthouse, four tonnes of garnet to blast off the old paint, plus a team of 12.
